

EDM rotary tables ultra precise

The line of CNC EDM rotary tables from Jauch and Schmider comprises a wide range of standard and special tables for rotary and swiveling axis applications for wire and die sinking EDM machines as well as CNC machining centers. Jauch & Schmider adds one, two, or three additional axes to an existing EDM machine. These ultra precise EDM tables are fully submergible and offered in standard and application specific multi-axis configurations. All tables are available for direct machine control integration or with the single/multi-axis Logipos control. Jauch and Schmider tables are designed to accommodate leading clamping systems such as Hirschmann, Erowa, System 3R, and others.
